

PARAGON EXCHANGE GRANULAR RECOVERY

Paragon Exchange Granular Recovery is a plug-in to MS Outlook 2003/2007 that enables to get transparent access to mail databases of MS Exchange Server 2003/2007/2010 through the standard facilities of MS Outlook for easy and fast data recovery at a granular level.

Exchange Granular Recovery:

- Supports mail databases of MS Exchange 2003/2007/2010
- Accesses Exchange databases inside archives of Drive Backup 10
- Accesses Exchange databases inside archives of Exchange Protection (PEP)
- Fully integrates with MS Outlook 2003/2007
- Saves you from the need of brick-level mailbox backups
- Exports e-mail items (a single mailbox, folder, message, note, etc.) from EDB files to a standard or a new PST, an Exchange mailbox, or any other file (HTM, MSG, TXT, etc.)
- Plays back transaction logs to recover a mail database with the latest changes reflected
- Works simultaneously with multiple EDBs
- Allows selection of mailboxes to work with

Primary audience:

- IT service providers
- System administrators working for small and mid- sized companies
