New version of Paragon Partition Manager Released

New version sports unique XP style interface, new wizards and even faster performance.

September 2006 – San Jose

Paragon Software Group, the leading provider of innovative, reliable technologies and software solutions in the field of storage management and data safety, announces the release of their latest version of **Partition Manager**, the product that provides easy and reliable hard drive partitioning and hard disk management. It enables users to create, copy, resize and move hard drive partitions and perform other hard drive maintenance tasks, with new and improved wizards to guide the way.

“Every PC owner needs the ability to manager their hard drives. An optimum allocation of disk resources is key to managing today’s data and operating effectively.” - says Konstantin Komarov, CEO of Paragon Software Group, - “Our customers tell us that they need a really fast and effective solution that does exactly what it promises. Partition Manager does just that.”

Paragon Partition Manager 8.0 is available in 4 editions- Personal, Server, Small Business Server and Enterprise. Each specific edition includes features that have made the product unique and really reliable. The entire product line is based on a new user-friendly interface that is easy-to use and can cut costs on professional IT services. We have asked our customers what their interface requirements and desires were. The result is our new approach to the product’s usability. For the most widely used tasks we have created simple wizards that perform these tasks for both professional and home users.

Enterprise Server Edition has a new, extraordinary function called **Initial Backup**. Initial Backup is for use on servers and provides administrators the confidence to know that they cannot lose important corporate data during server operations. Initial Backup creates a complete hard disk image before performing partitioning operations. The ability to create a complete image and perform partitioning tasks, all in one step, was the most frequently received request from our customers.

Paragon Partition Manager 8.0 Technician License – part of our Flexible License Program, is a cost-effective option for system administrators, technicians and consultants working in and serving small, mid-sized or large corporate environments. This License allows the licensed individual to use the software on an unlimited number of **desktops, workstations and servers!** This is just one of the many Flexible Licensing opportunities available to our customers.
