Paragon Software Launches Hard Disk Manager 11 Server for Data Backup and Disaster Recovery

Incorporates the Latest Technologies in Partitioning, Disk Imaging and System Migration for All Drives Including 3TB and 4K Advanced Format HDDs and SSDs, in Physical or Virtual Environments

IRVINE, Calif., May 3, 2011 - Storage software development leader Paragon Software Group announced the launch of *Hard Disk Manager (HDM) 11 Server* to ease [data backup](#) and [disaster recovery](#) tasks for IT departments. The software suite incorporates the latest partitioning, [disk imaging](#) and system migration technologies for advanced format hard disk drives (HDDs) larger than 2.2TBs with 4K sectors as well as solid state drives (SSDs). The software is applicable for both physical and virtual Windows server environments.

HDM 11 Server comes standard with all of the new and upgraded features listed below for complete data backup and disaster recovery functionality. A virtual add-on component is available for virtual environments. Both versions offer the ability to perform bare-metal restores, file-level recovery, advanced data wiping algorithms, and automatic partition alignment. Additionally, *HDM 11 Server* enables data back up or migration of an active server with locked volumes, files or folders.

"Over the past few months we have received significant interest from our small-business and mid-enterprise customers for backup and recovery software solutions designed for hard drives larger than 2.2TBs," said Tom Fedro, president of Paragon Software Group. "These newer drives complicate backup and recovery procedures because some Windows drivers fail to read any space over 2.2TBs. As a result, the drives' performance can become compromised. We have developed *HDM 11 Server* and its comprehensive suite of backup and recovery technologies to simplify this issue and speed up the whole data protection process."

Software Highlights

- Support for 2TB+ hard drives, 4K, SSD, and AFD
- Support for GPT conversion capability. Convert from MBR to GPT or Retained GPT.
- Large drive support for legacy operating systems. GPT Loader enables XP, or any later Windows OS, to recognize drives larger than 2.2TB (The GPT Loader driver replaces legacy drivers that do not recognize larger drives)
- Automated partition alignment during copy and restore
- Copy and restore functionality with the ability to shrink partitions to smaller drives
- Support for USB 3.0

HDM 11 Server is available for \$799 per license, \$1298 with the virtual add-on component.

*Editor's note: Hard Disk Manager 11 Server is available for review. Contact Deanne Hollis at 951-346-4883 or dhollis@mainstreetpr.com.

About Paragon Software Group

Paragon Software Group is an innovative software developer focused on two dynamic growth markets -- data storage and mobile productivity. The company's comprehensive product line for the data storage market addresses the needs of data security, storage and management for PCs, servers and networks. A second portfolio of products focuses on mobile productivity applications for handheld devices. Founded in 1994, Paragon Software has offices in the USA, Germany, Japan, Poland and Russia delivering its solutions to consumers, small business and enterprise clients worldwide through a network of Value Added Resellers, distributors and OEMs as well as online through the company website. Paragon Software provides technology to a host of world class companies and partners including Cisco, Dell, ASUS, Seagate, Buffalo, Iomega, Siemens, Lenovo, Microsoft, Motorola, Nokia, and more. For more information please visit the company website at www.paragon-software.com.
